Latest MP Host Release

Right click on the MP Host controller window and from the menu select "Check New Version".
It will open a web page and and compare if you have the latest version installed.

You can **download** the latest release from your account in the user portal. For other software updates and current versions check the user portal.
Version changes logs are accessible via the user portal.

New version December 2025 and onwards
In this update we implemented a new communication system that allows all plugins/apps (MP MIDI, Control Surfaces, MP Gain Utility) including the Single Hosts to be part of the Plugin Panel, Plugin History and therefore switching from/to these via the touch screen. This means that in projects where you have many plugins, you can enter the Plugin Panel from one mp window, and then navigate to any mp controller plugin or control surface app/plugin, without having any small windows open.

This video explains the MP Controller best practices.
