17. Windows Unified Option

This option can be accessed from the right click menu.

When it is unchecked (default), the hosted plugin has its own Window instead of being embedded the MPH Window. If checked, the hosted plugin will open inside the MPH existing Window.

The default value is "unchecked - not enabled".

After you check the box, right click anywhere on the black area of the MPH big Window to display the menu.

Click again to hide the menu and this will reload the GUI of the hosted plugin and the change will take effect.

This "**Unified Window**" option is helpful if you are using multiple 4k monitors and you encounter the hosted plugin to appear outside the controller monitor. It ensures that the hosted plugin will always be placed at the center of the MP Host window. It is also helpful if plugins generate new option windows and these may be hidden behind the MP Host.

This option is saved in a plugin xml preset so next time you recall your preset it will be part of it.

> Note that if the Top Bar option is enabled, then Windows Unified option is not available to use abnd it will be greyed out. Disable the Top Bar option and the Windows Unified can be enabled.
