26. Controlling Steinberg plugins such as Halion, Padshop and Retrologue

You may find that when linking some encoders on parameters of Steinberg plugins may seem stuck or behave erratically. To overcome this issue click on Encoder options (right click menu > Encoder Options, on the MP Host) and choose Absolute mode instead of Relative mode which is the default.

In addition, via the right click menu enable Windows Unified

If some parameters have MIDI CC assigned to them, right click and Forget CC. This may conflict with the VST method that the MP Controller uses to control parameters.
