

## 32. Mac - Right click with Magic Mouse does not show pop up menu in the Favorites Window

There were reported cases where some versions of the Magic mouse would not show the right click menu in the Favorites window.

You can use a mouse with a dedicated right click button, like a PC mouse, Apple Trackpad.

On the Mac, with magic mouse, you have to press the CTRL key simultaneously to generate the right mouse click however this does not work in the Favorites right click menu.
