5. Initial Setup Guide - How to setup the mp controller the first time

To setup your MP Controller the first time, you need to follow the initial guide **sent by email** when you had purchased the MP Controller.
That initial guide covers the important steps in order on how to connect the MP Controller, register the controller on the portal, download the MP Host plugins and generate the needed license.

> Do not begin your setup using the knowledge base only. You need to follow the initial guide first. This knowledge base offers information on the functionality of the MP Controller, how to setup control surfaces for DAWs and how to troubleshoot.
