

## 6. Mac - The MP Host Window appears on another display

Ensure you are using the latest MP Host plugin. The method that the target display is chosen has been updated in the 11/2024 version of the MP Host.

On the Mac it is a good practise to go in Mission Control, disable the option “Displays have separate spaces”. This will also remove the Mac OS top menu bar from appearing on top of the MP Host window.

Please note that the target monitor needs to be set once for each: MP Host, MIDI App, Ableton MPH as they are using different setting files.

To select the target monitor see [here](#)
