

# Sending MIDI to different tracks in Ableton Live from the MPSEQ

Here is how to send MIDI to different tracks in Ableton Live from a single instance of the MP Sequencer (plugin and standalone MPSEQ). The same principle applies to other DAWs.

Create a virtual port in [loopMIDI](#), named TO DAW.

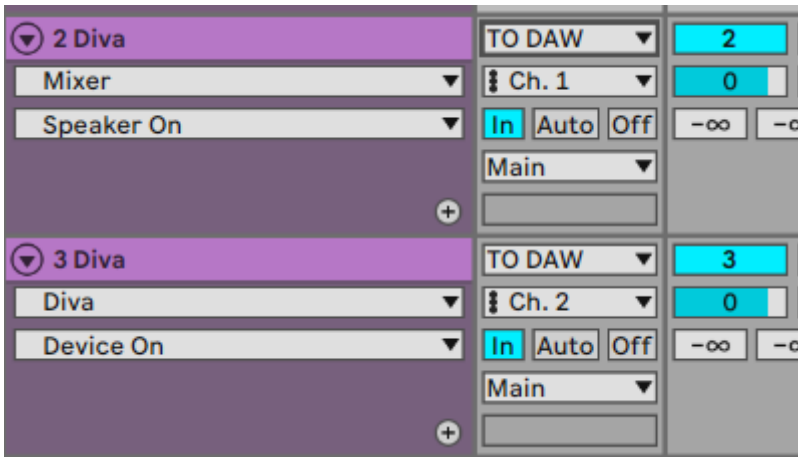

Select this port in the MIDI out of the sequencer pages you want to use. Then select the MIDI channel to send MIDI output.

Set the Input port in Ableton Live settings, Track - checked

| Input Ports                | Track                               |
|----------------------------|-------------------------------------|
| ▶ 7- Steinberg UR22mkII -1 | <input checked="" type="checkbox"/> |
| ▶ nanoPAD2                 | <input type="checkbox"/>            |
| ▶ LoopBe Internal MIDI     | <input type="checkbox"/>            |
| ▶ TO DAW                   | <input checked="" type="checkbox"/> |

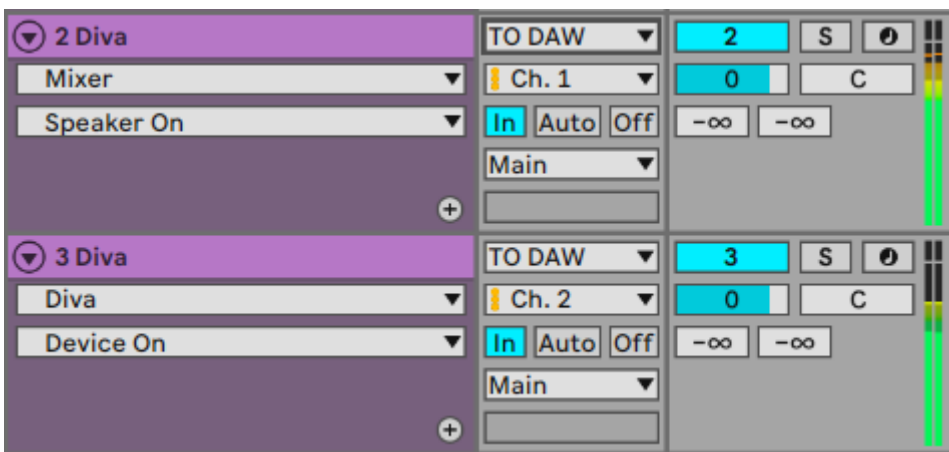

Select the MIDI IN port and Channel on the Ableton Live track

Ensure that all pages are set to Enabled in MPSEQ

Press G.Play and your instrument tracks will play.

In case you are using the standalone MPSEQ, to enable Play/Stop from the DAW see [here](#)
